List of publications

   Inserted intrauterine transmitter for measurement of fetal heart rate.

   Simple delay device for analog signals.

   Simple method for analog delay.

   Electrocardiographic potential distributions in newborn infants from 12 hours to
   8 days after birth.

   Measurement of O$_2$ content in microliter blood samples.

   The response of the carotid sinus chemoreceptor reflex to time varying Po$_2$.

   Measurement of respiratory parameters in blood of chicken embryo.

   Respiratory properties of chicken embryonic blood during development.

   Effect of reducing the shell area on the respiratory properties of chicken embryonic
   blood.

    Gas exchange in chicken embryo.

    Hypothermal effect on the gas exchange in chicken embryo.

Analysis of oxygen transport in bullfrogs.
*Oxygen Transport to Tissue*-III. 199-204.

Gas transfer in the chorioallantois.

Oxygen transport in chicken embryos under hypothermal exposure.

Incompletely separated double circulation and oxygen transport in the bullfrogs,
*Rana catesbeiana*: Experimental data and model analysis.
*Pflugers Archiv.* 373: R21

Le transport des gaz respiratoires par la circulation chez la Grenouille Rana catesbeiana.
*J. Physiol.* (Paris) 74: 47A.

Le taux de melange des sangs arterialise et veineux dans le caeur de la Grenouille Rana catesbeiana.
*J. Physiol.* (Paris) 74: 43A.

Diffusive respiratory alkalosis and metabolic changes induced in the chick embryo by a helium atmosphere.

Blood oxygen dissociation curve of the frogs, *Rana catesbeiana* and *Rana brevipoda*.
*J. Comp. Physiol.* 129B: 111-114.

Respiratory gas transport by the incompletely separated double circulation in the bullfrog, *Rana catesbeiana*.

Repetitive and simultaneous sampling from the air cell and blood vessels in the chick embryo.

Oxygen and CO₂ exchange and acid-base regulation in the avian embryo.
Analysis of chorioallantoic gas exchange in the chick embryo. 

Adverse effect of failure to turn avian egg on the embryo oxygen exchange. 

Compensation of diffusive respiratory disturbances of the acid-base balance in the chick embryo. 

Changes in acid-base balance of chick embryos exposed to a He or SF$_6$ atmosphere. 

Effect of O$_2$ and CO$_2$ in N$_2$, He and SF$_6$ on chick embryos blood pressure and heart rate. 

Measurement of blood pressure of chick embryo with an implanted needle catheter. 

Relationship between veno-arterial CO$_2$ content difference and veno-alveolar Pco$_2$ difference in acute hypercapnia in dogs. 

Blood carbon dioxide dissociation curves of developing chick embryos and chickens. 
*The Physiologist.* 24: 58.

42. Tazawa, H. 1981. 
Compensating processes for metabolic and respiratory acid-base disturbances in the chick embryo. 

Regulatory processes of metabolic and respiratory acid-base disturbances in embryos. 

Mathematical formulation of the CO$_2$ dissociation curve and buffer line of human blood at rest. 
   Blood gases and acid-base status in chicken embryos with naturally varying egg
   shell conductance.
   Respir. Physiol. 54: 137-144.

   Quantitative analyses of the CO2 dissociation curve of oxygenated blood and
   the Haldane effect in human blood.

   Gas exchange, blood gases and acid-base status in the chick before, during and after
   hatching.
   Respir. Physiol. 53: 173-185.

   Deviation of theoretical equation of the CO2 dissociation curve and the carbamate
   fraction in the Haldane effect.

   and after hatching. Proc. of IUPS Satellite Symposium, Respiration and

   Carbon dioxide dissociation and buffering in chicken blood during development.
   Respir. Physiol. 57: 123-134.

   Carbon dioxide transport and acid-base balance in chickens before and after hatching.
   In: Respiration and Metabolism of Embryonic Vertebrates. ed. by R. S. Seymour,
   Dr W. Junk Pub., Dordrecht (The Netherlands), pp.333-345.

   Cardiovascular shunts in the avian embryo and comparative model analysis of
   central shunts in vertebrates.

   Response of egg temperature, heart rate and blood pressure in the chick embryo
   to hypothermal stress.

   Variability of shell conductance and gas exchange of chicken eggs.
   Respir. Physiol. 59: 339-345.

   Cardiovascular shunt and model analysis in the chick embryo.
   In: Cardiovascular Shunts. eds. by K. Johansen and W. Burggren, Munksggard,
   Copenhagen, pp.179-198.

Simultaneous acquisition of ECG, BCG and arterial blood pressure from chick eggs.
*The Physiologist* 30: 139.

Oxygen consumption and growth of chick embryos with shell conductance altered widely from the beginning of incubation.
*The Physiologist* 30: 159.

*The Physiologist* 30: 159.

Metabolic compensation for gradual cooling in developing chick embryos.

Blood gases and hematological variables of chick embryos with widely altered shell conductance.

A blood-gas nomogram of the chick fetus: Blood flow distribution between the choriallantois and fetus.

The analysis of Po2 difference between air space and arterialized blood in chick eggs with respect to widely altered shell conductance.

Cooling rates of living and killed chicken and quail eggs in air and in helium-oxygen gas mixture.

Gas exchange and development of chicken embryos with widely altered shell conductance from the beginning of incubation.

Short-term effects of altered shell conductance on oxygen uptake and hematological variables of late chicken embryos.

Metabolic responses of chicken embryos to graded, prolonged alterations in ambient temperature.
   Metabolic responses to gradual cooling of chicken eggs treated with thiourea and oxygen.

   Oxygen consumption of Brown Noddy (*Anous stolidus*) embryos
   in a quasiequilibrium state at lowered ambient temperatures.

   Noninvasive heart rate monitoring system for avian embryos based on
   ballistocardiogram.

   Simultaneous acquisition of ECG, BCG and blood pressure from chick embryos
   in the egg.

   Noncontact measurements of avian embryo heart rate by means of the laser speckle:
   comparison with contact measurements.

   Noninvasive determination of the embryonic heart rate during hatching in the Brown
   Noddy (*Anous stolidus*).

   Comparative metabolic responses to prolonged cooling in precocial duck
   (*Anas domestica*) and altricial pigeon (*Columbia domestica*) embryos.

   Cardiogenic ballistograms of chicken eggs: comparison of measurements.

   Noninvasive determination of the embryonic heart rate during hatching in the Brown
   Noddy (*Anous stolidus*).

   Embryonic heart rate during development of domesticated birds.

   The early development of thermoregulation in birds.

Israel J. Zool. 40: 467-480.

105. Tazawa, H., Watanabe, W. and Burggren, W. W. 1994. Embryonic heart rate in altricial birds, the pigeon (Columba domestica) and the bank swallow (Riparia riparia). 

Direct comparison between both developmental patterns of oxygen consumption and
heart rate in chick embryos: O_2 pulse.
4th International Cong. of Comp. Physiol. and Biochem., Birmingham, Aug. 6-11.

Pharmacological approaches to autonomic control of heart rate in chick embryos
residing inside eggshell.
4th International Cong. of Comp. Physiol. and Biochem., Birmingham, Aug. 6-11.

Developmental patterns of O_2 consumption, heart rate and O_2 pulse in unturned eggs.
Respir. Physiol. 103: 83-87.

Effects of pre-incubation egg storage on embryonic functions and growth.
Respir. Physiol. 103: 89-98.

Heart rate of developing avian embryos.

Avian cardiovascular development.
In: Development of Cardiovascular Systems: Molecules to Organisms.
ed. by W. W. Burggren and B. Keller. Cambridge University Press, New York,

Noninvasive determination of instantaneous heart rate in developing avian embryos
by means of acoustocardiogram.

Ballistocardiogram of avian eggs determined by an electromagnetic induction coil.

Avian egg - experimental model for study of developmental physiology.
International Workshop on Homeostasis and Environment during Development-

Developing patterns of blood pressure in chicken embryos.

Developmental patterns of heart rate in altricial avian embryos and hatchlings.

Effects of drilling holes into the air cell of incubated goose eggs on distribution of oxygen partial pressures under the shell.

Embryonic heart rate measurements during artificial incubation of emu eggs.
*Br. Poult. Sci.* 41: 89-93.

Continuous measurements of instantaneous heart rate and its fluctuations before and after hatching in chickens.

Development and regulation of heart rate in embryos and hatchlings of gulls (*Larus schistisagus* and *Larus crassirostris*) in relation to growth.

Heart rate fluctuations in newly hatched chicks: patterns and origins.

Responses of heart rate to low temperature exposure in perinatal chick embryo.

Cardiac rhythms in prenatal and perinatal emu embryos.

Cardiac rhythms in developing emu hatchlings.

Development of blood pressure rhythms of chicken embryos.

Ontogeny of respiratory rhythms in perinatal chick embryos.

Workshop on Fundamental Physiology and Perinatal Development in Poultry.
Humboldt-University of Berlin, Berlin, October 9-11.

Prenatal development of rhythmic blood pressure and heart rate fluctuations in chick embryos – a mechanism to allow reactions to environmental stress (Gallus gallus f. domestica)
Workshop on Fundamental Physiology and Perinatal Development in Poultry.
Humboldt-University of Berlin, Berlin, October 9-11.

Development of cholinergic chronotropic control in chick (Gallus gallus domesticus) embryos.

Maturation of homeothermic response of heart rate to altered ambient temperature in developing chick hatchlings.

Embryonic cardiovascular variables during incubation.

Early development of thermoregulatory competence in chickens: responses of heart rate and oxygen uptake to altered ambient temperatures.

Ontogeny of respiratory sinus arrhythmia in chick embryos.

Development of heart rate circadian rhythms in chicks.

Embryonic physiology during incubation.
WPC 2004 XXII World’s Poultry Congress, Istanbul (Turkey), June 8-13.

Cardiac rhythms in avian embryos and hatchlings.

Development of endothermic heart rate response in emu (*Dromaius novaehollandiae*) embryos.

Video analysis of body movements and their relation to the heart rate fluctuations in chicken hatchlings.

Continuous, long-term observation of early development of chicken embryos in ovo.

Permeation of volatile chemical compounds through an eggshell as determined by a newly developed high-sensitivity analytical system.

Development of endothermic metabolic response in embryos and hatchings of the emu (*Dromaius novaehollandiae*).

Endothermic heart rate response in broiler and White Leghorn chicks (*Gallus gallus domesticus*) during the first two days of post hatch life.

‘Blood-doping’ effects on hematocrit regulation and oxygen consumption in late-stage chicken embryos (*Gallus gallus*).
